

## Rapid Fix

A flexible safety system for the industry.  
Rapidly mounted and quick to dismount.

**TROAX**<sup>®</sup>

# Rapid Fix by TROAX

## - A state-of-the-art security system.

By introducing Rapid Fix, TROAX once again proves its ability to comply with the demands for security and protection within the industry.

Rapid Fix is especially suitable in industries where industrial robots and other automated high capacity machinery are vital parts. Naturally Rapid Fix complies with all the relevant standards for machine security, as for example EN-953, EN-292.

One of the main advantages with Rapid Fix is the speed in which the system is mounted, and that one man normally mounts it.

Thanks to the mounting details in reinforced polymer it is also quick to dismount one or more panels in the system. This means that service technician or others who have to have access to the machines without any delays can do their job. The dismounting is carried out with a special tool, which ensures that no unauthorised person can do it.

The post and the foot are separated which makes it possible to easily have a large opening when it is needed.

The mounting details in reinforced polymer have a well-documented strength, and meets demand and standard.

Rapid Fix is a modular system and it is easy to change the mesh panels into panels in full steel, sound-absorbing panels or transparent panels with or without UV-protection. Naturally Rapid Fix is

equipped with doors according to the customers specification. You can choose among different kinds of doors and locks in compliance with your needs.

Rapid Fix – the solution for avoiding working place injuries and unplanned standstills in an efficient way.

Post and foot separated.

Mounting details in reinforced polymer and steel.

Easy and fast to mount.

The height of the post is easily adjusted.

Quickly dismantled with a special tool.

The modularity enables easy change of panels.

# So easy!

1

Your Rapid Fix system is delivered in space-saving package.

2

The foot is mounted in the floor. To your help you can use a pre-setting fixture.

3

The posts are mounted in the feet, but not fixed.

4

The mounting details are mounted on the panels.

5

The panels are mounted.

6

The pre-mounted door is mounted.

7

Ready.

# So fast!
